

NEXTCHEM (MAIRE) AWARDED BY DG FUELS AN EARLY ENGINEERING, LICENSING AND PDP CONTRACT BASED ON ITS PROPRIETARY NX CIRCULAR™ GASIFICATION TECHNOLOGY FOR AN ADDITIONAL SUSTAINABLE AVIATION FUEL (SAF) PLANT IN NEBRASKA (USA)

- **Licensing and PDP are subject to Notice to Proceed**
- **This is NEXTCHEM's second SAF initiative with DG Fuels, following the successful results of the first project under development in Louisiana**
- **The plant, set to be operational in 2029, will produce up to 450 million liters per year of SAF, which combined with Louisiana's capacity will account for approx. 8% of the US SAF mandate by 2030**

Milan, 4 December 2024 – **MAIRE S.p.A.** through its subsidiary **MyRechemical**, a key player in the Waste-to-Chemical segment, has been awarded by **DG Fuels LCC** an early engineering, licensing and Process Design Package (PDP) contract based on its proprietary NX Circular™ gasification technology for a SAF plant located in Nebraska, USA.

The plant of DG Fuels, a US company engaged in renewable hydrogen and low emissions aviation fuel, is expected to be operational in 2029, with an annual production of 450 million liters of SAF derived from residual biomass.

The licensing and process design package phase is subject to Notice to Proceed and is necessary for the implementation of the gasification and gas treatment units, able to process 1 million tons per year of corn stover, representing the first step for the SAF production.

The project meets the requirements set by the U.S. Department of Energy (DOE)'s Clean Fuels & Products Shot initiative, which aims to decarbonize the aviation sector by industrializing SAF production. Additionally, SAF derived from biomass or waste resources is eligible under the Carbon Offsetting and Reduction Scheme for International Aviation (CORSA) established by the International Civil Aviation Organization (ICAO) to reduce airlines' carbon offsetting requirements. The combined capacity of DG Fuels' SAF plants in Louisiana and Nebraska could potentially account for 8% of the US SAF mandate by 2030¹.

Fabio Fritelli, NEXTCHEM MD, commented: "This project builds on the successful completion of the engineering phase for DG Fuels' SAF plant in Louisiana, announced in December 2023. Together, these two projects rank among the largest global SAF initiatives, showcasing

¹ In September 2021, the Biden administration launched a government challenge to supply at least 3 billion gallons of SAF per year by 2030 and have enough SAF by 2050. NEXTCHEM's leadership in advancing circular solutions for decarbonization and its commitment to the strategic market of North America.”

MAIRE S.p.A. is a leading technology and engineering group focused on advancing the Energy Transition. We provide Integrated E&C Solutions for the downstream market and Sustainable Technology Solutions, the latter through three business lines: Sustainable Fertilizers, Low-Carbon Energy Vectors, and Circular Solutions. With operations across 45 countries, MAIRE employs over 9,300 people, supported by a global network of 20,000 project partners. MAIRE is listed on the Milan Stock Exchange (ticker "MAIRE").
